

Disclaimer for the use of “estimates”: sources used on the night of the European elections 2024 (09 June 2024 from 18:15 CET TIME)

On the night of the European elections, Verian will project the seats of the next European Parliament. As from 18.00 CET, Verian will publish seat projections in the form of ‘national estimates’ for Member States where voting has closed. Data for these ‘national estimates’ will come from publicly available sources such as exit polls, ‘estimations’ (in France, Malta and Austria) or even traditional pre-election polls (only Spain). In this case, the label “estimate” will accompany the data and chart. These ‘national estimates’ will be the only available national data before the publication of official results starts (23.00 CET).

The following table sets out the list of sources Verian will use to calculate the seats obtained per party and European political group at a national level and in the global EP projection. As soon as provisional or final results are published by the responsible national election authorities, they will replace the national estimates listed below:

Countries (in order of publication)	Potential sources
Austria	“Trends analysis” for ORF (Austrian Broadcasting Corporation) in cooperation with the Puls-group (media) and APA (Austria Press Agency). https://www.ots.at/presseaussendung/OTS_20240412_OTS0084/orf-schwerpunkt-zur-eu-wahl-24
Cyprus	Exit poll published by ANTI from the agency CYMAR https://www.cymar.com.cy/en-gb/home/
